ANY SITUATION

INSTANT READY GET GOING IN SECONDS

1

Warm-up on range with TM4
TM4 unit needs first time full boot sequence (1 min)

2

Retract the back leg and bring on course
TM4 will go into stand-by mode and stay connected via Wi-Fi to iOS device

3

Open back leg and put on the ground
Unit will level hyper-fast

4

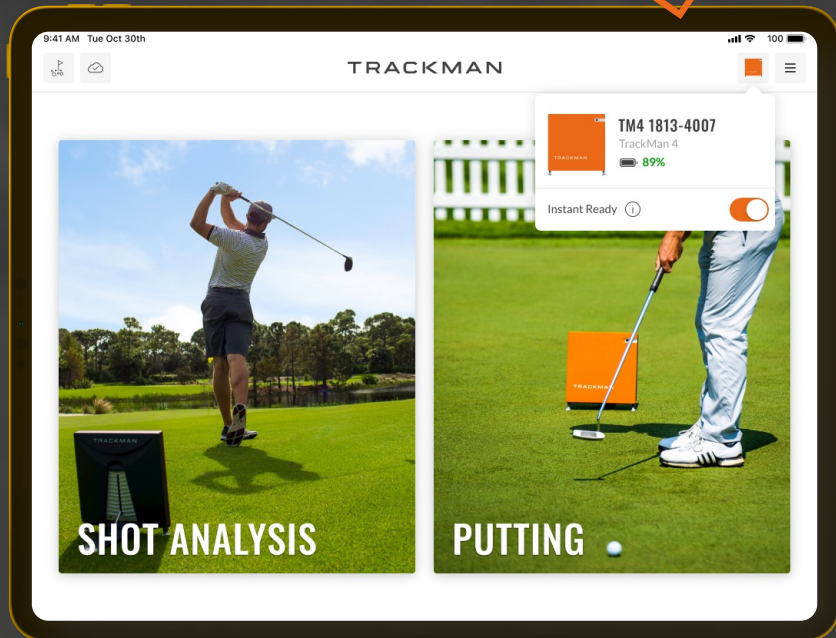

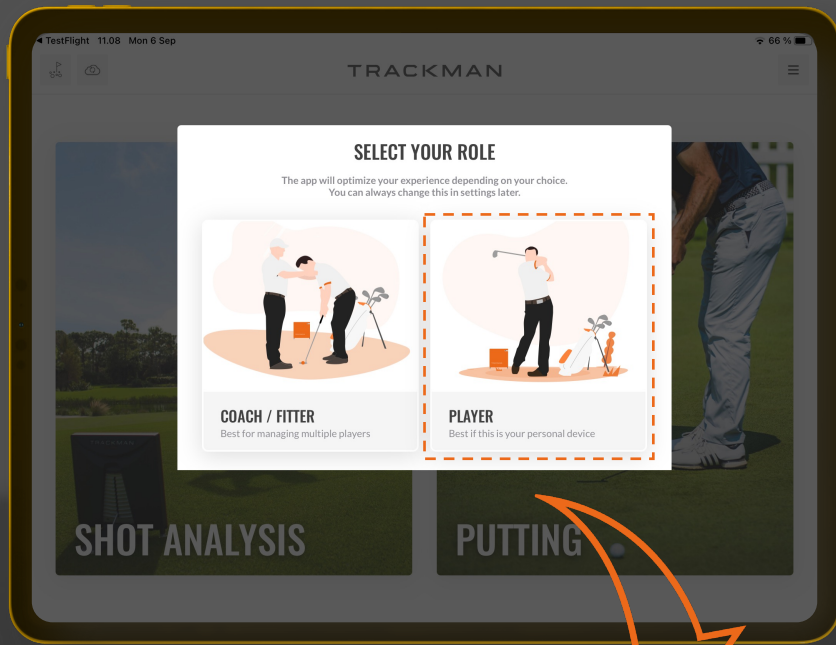

Unit is ready to track instantly
All parameters related to vertical and speed/distance measurements are available without any need for target selection

5

Repeat across the entire course
Note, putting will require a new session to be started

REQUIREMENTS AND SPECIFICATIONS

- TM4 v2.2 and TM GO 2.9 or later
- "Player" profile selected in TM GO app
- Stand-by mode will use 10% battery /h
- Any parameter related to horizontal (R/L) will require target to be calibrated

Instant Ready is ideal for taking the TrackMan 4 out on the course

In this mode, the back leg will be used to put the unit in sleep mode, that allows for the faster start.

Keep in mind that this will still use the battery, as it will keep the Wi-Fi connection to the iOS device.

In order to shut down the unit to save battery when this mode is enabled, you must use the power button.

Shutting down the unit will however require a full startup time at the first startup.

When Instant Ready is enabled, the app will automatically start tracking when you start Shot Analysis and skip all setup steps.

Note, Instant Ready is not using a target line and will not display data for numbers with reference to a target line. In order to see all parameters from this mode, a target calibration is required.

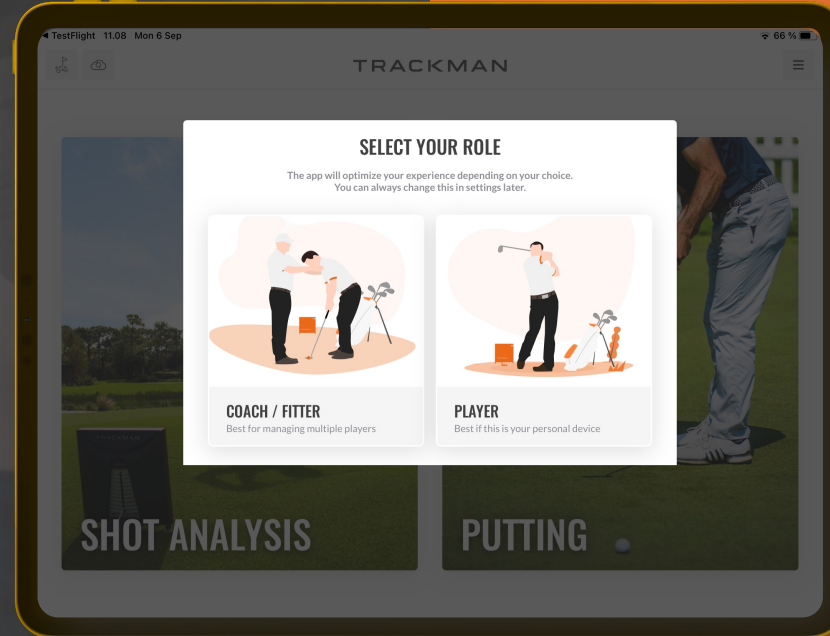

This feature is only available when “Player” role has been selected”

COACH / FITTER

This profile is optimized for managing multiple players on the system.

When starting Shot Analysis, the user is taken through both target and player selection.

This is similar to the default app behavior from previous version.

PLAYER

This profile is optimized for personal use.

When starting Shot Analysis, the logged in user is set as default player and target selection is skipped, for a quicker start.

In order to get all parameters, you can set the target from inside the live session.

Instant Ready is available in this mode.
